# LISTSERV Maestro 8.0

- **LISTSERV Maestro Companion App**
  The main new feature in LISTSERV Maestro 8.0 is support for the new LISTSERV Maestro Companion mobile app, that is available for Android and iOS:

  Google Play Store:
  https://play.google.com/store/apps/details?id=com.lsoft.lui.app.lmc

  Apple App Store:
  https://itunes.apple.com/us/app/listserv-maestro-companion/id1237148363

  The LISTSERV Maestro Companion gives you access to your LISTSERV Maestro accounts on your mobile phone or tablet. Its features include:

  - View delivery and tracking statistics of delivered mail jobs on your mobile device.
  - Get push notifications to your mobile device when mail jobs are delivered or tracking data has been collected.
  - Authorize mail jobs for delivery that you have previously prepared in LISTSERV Maestro.
  - View the "Ongoing Jobs" list and manage jobs in this list.
  - Connect with multiple LISTSERV Maestro accounts and easily switch between the accounts.

- **LDAP and Windows Active Directory Support**
  LDAP/AD support was added for two use cases:
  - To select user data from an LDAP or Active Directory server, for example recipient data, subscriber data, or data for a drop-in.
  - For authentication of LISTSERV Maestro logins, for example so that users can login to Maestro with their normal Windows password.

- HTML drop-ins can now be used in plain text, and plain text drop-ins can be used in HTML, with automatic (simple) conversion of HTML tags.

# LISTSERV Maestro 8.1

- New option for the template administrator, to enable/disable system content templates, so that disabled templates do not appear in the template gallery when defining the content of a mail job.

- Improved recipients details report, and the report is now also available for any selected mail job (via "*Create Tracking Event Report On Selected Job*" menu entry), without the need to first create and save a user defined report.

- Improved handling of database and LDAP connections, for access to user databases (for example to select recipients, import subscribers or load drop-in data). Also with security related improvements (server whitelist and access rate limit).
